

How to change password with SQL Developer

PASSWORD command

Open a connection to the EDU1 database with SQL Developer and type in the **password** command as shown below. Then run the **password** command by clicking the green arrow.

Enter the current and new passwords. Note that passwords must begin with an alpha letter. Then click "Apply".

Close Oracle SQL developer and attempt to log on again with the new password to verify that the password was changed successfully.

When you launch SQL developer, double click on the EDU1 icon on the left side of the screen. This will open a login window.
